

Three ways to grow The Care Connexion without growing your operations team

TO Bradley Evsich, Co-Founder & COO, The Care Connexion
FROM Arslan Noor, CTO, ElectroCom IT
DATE September 26, 2026
RE Platform investments in therapist supply, referral speed and agency retention

Summary

The Care Connexion has proven the model: agencies post referrals, vetted therapists take them directly, and the staffing middleman drops out. The next stage of growth depends on how much volume the platform and a small team can carry. This memo sets out three investments that would let you add agencies and therapists faster, keep your speed promise as volume rises, and make agencies harder to lose.

Each one protects a promise you already make on your website:

- Most referrals filled in 15 minutes or less
- 100% credential compliance
- \$10 cost savings per visit
- No more relay delay

PROPOSAL 1

Scale therapist supply without adding operations staff

TODAY	New therapists and agencies join through a contact form, and your team onboards and checks each one by hand. As demand grows, onboarding speed sets the ceiling on network growth, and the credential promise depends on people catching every expiring license.
PROPOSAL	A self-service sign-up where therapists join, upload their credentials and are verified automatically. The platform tracks every license and certification, reminds therapists before anything expires, and pauses anyone who falls out of compliance until they renew.
IMPACT	- Therapists start taking referrals in days instead of waiting in a manual queue. - Lower operating cost per new therapist; your team's time goes back to agency relationships. - A compliance promise you can stand behind in every agency sales conversation.

PROPOSAL 2

Protect the 15-minute fill as referral volume climbs

TODAY	Your speed advantage depends on therapists seeing and accepting referrals right away, and most of them spend the day on the road between home visits, away from a desk.
PROPOSAL	A mobile app for therapists that alerts them to new referrals nearby, lets them accept in one tap, and handles visit paperwork and mileage from the phone, including in areas with a weak signal.
IMPACT	- Faster and more consistent fill times, so the promise holds as volume grows. - A better experience that keeps your best clinicians active on the platform. - Paperwork done sooner, so visits become billable and payable work faster.

Become part of how agencies run, so they stay

TODAY	Agencies approve and download visit paperwork, then re-enter it into the system they use to run the agency. That duplicate work costs them time and makes The Care Connexion a tool they could replace.
PROPOSAL	Connect the platform directly to the major home health agency systems, so referrals arrive automatically and completed visit documentation flows back without re-typing. Build it in phases on technology you own, alongside your current platform, so growth is never capped by what an off-the-shelf builder supports.
IMPACT	- Stronger agency retention once you are part of their daily operations. - A clear selling point for new agencies: no re-entry and no delays. - A foundation that handles much larger volume, with long-term costs you control.

Where AI fits

AI is most useful where it removes waiting and re-work. In every option below, a clinician or the agency keeps the final decision.

OPPORTUNITY	WHAT IT DOES	BUSINESS RESULT
Referral intake and matching	Reads an incoming referral packet, fills in the referral, and offers the case first to the best-matched available therapist.	Referrals posted in seconds and filled faster.
Documentation assistant	Drafts the visit note from the therapist's spoken summary and checks every note for missing items before the agency approves it.	Fewer returned notes and on-time payouts.
Fill-risk pricing	Predicts which referrals will be hard to fill, such as long drives or complex cases, and suggests a rate that gets them taken.	Less rate negotiation and fewer referrals left waiting.

Security and compliance

SOC 2

Our SOC 2 Type I audit is underway with an independent US CPA firm, scoped to the Security criteria. Type II follows.

HIPAA

We build to HIPAA from the first sprint. Patient information only reaches service providers that sign a business associate agreement.

Suggested first step

- 1. A 30-minute working session to walk through how a referral moves today, from posting to payment, and where your team still steps in by hand.
- 2. A short written scope for one fixed first phase, most likely Proposal 1, with its timeline and cost.
- 3. You decide on the first phase with the value in front of you, before any larger commitment.

Arslan Noor

CTO, ElectroCom IT. In 2025 I worked with OpenAI on training their video generation models. My team builds platforms for founders without an in-house engineering team.
