

DELIVERY PARTNERSHIP · CONFIDENTIAL

ElectroCom × TRK Infratech

Senior AI & engineering specialists, on tap.

A two-way delivery partnership — embed our in-house senior engineers into your teams for the high-leverage phases, and refer overflow both directions.

WHERE WE LANDED ON THE CALL

Same lane — so let's complement, not compete.

We both plug specialists into AI teams for the phases that matter. The useful shape isn't vendor–client — it's partnership.

01

Two-way referral

When either of us has demand the other can cover, we refer or subcontract — both directions.

02

In-house resources

We bring our own senior bench — not recruiters reselling contractors.

03

White-label

Our engineers work under your brand. Your client relationship stays yours.

WHO WE ARE

ElectroCom — a team that ships production AI, not demos.

11+ engineers across AI/ML, full-stack, and DevOps. We build and run real products in production — where the model is rarely the bottleneck.

The hard part is guardrails, context management, and reliability. That's the work we specialize in.

AI / ML Engineering

RAG & LLM Infra

Full-Stack (Next.js / Django)

THE ANCHOR CREDENTIAL

Frontier generative AI

I worked on OpenAI's video-generation model training in 2025.

Direct, hands-on experience at the frontier of generative AI — and a production philosophy built from it: in real systems, the model is rarely the bottleneck. Guardrails, context, and reliability are.

PROOF WE SHIP — CASE STUDY

Effigy.ai — an AI product we built and took to market.

AI-generated fashion marketing photography — replacing physical photoshoots. A product of ElectroCom Innovations, live with paying brands.

95%

cost reduction vs.
traditional shoots

48 hrs

campaign turnaround,
upload to delivery

100+

brands producing
content on it

Generative pipelines, model conditioning, and a production delivery workflow — end to end. Not a prototype: a shipped, revenue-generating AI product.

WHAT WE PLUG IN

Specialist pods for the phases that create leverage.

RAG builds

Retrieval, chunking, grounding, and context management that survives production traffic.

Eval harnesses & pipelines

Reproducible evals so quality is measured, not guessed — the difference between shipping and iterating on demos.

LLM infra & scaling

Serving, latency, cost, observability, and reliability under load.

Full-stack & DevOps overflow

Senior Next.js/Python and cloud/DevOps capacity when a milestone needs more hands, fast.

Dropped into your core team for a defined phase — they own the architecture, we bring the depth.

THE IN-HOUSE BENCH

The people you'd actually be plugging in.

Arslan Noor — Senior AI Engineer

CTO · LLMs, RAG, frontier AI

Umar Farooq

Data Scientist · ML models, analytics

Zain Goraya

Senior Software Engineer

Bilal Arshad

Senior DevOps · cloud, CI/CD, infra

Muhammad Husnain

Data Engineer · pipelines

Haseeb Ilyas

Backend Engineer

Noman Aijaz

Full-Stack Developer

Senior, in-house, and already working together — not a marketplace of strangers.

HOW THE PARTNERSHIP WORKS

Three ways to engage — you pick per project.

MODEL A

Phase-based specialist

One expert for a defined milestone — a RAG build, an eval harness, a scaling push. Scoped and time-boxed.

MODEL B

Embedded engineer

A senior engineer dedicated to your team for a monthly rate. Works your hours, your stack, your standups.

MODEL C

Retainer overflow

Standing capacity you draw on when demand spikes — first call when you're stretched.

- **White-label.** We stay invisible. Your client, your brand, your relationship.
- **Both directions.** When we're stretched on delivery, you're our first referral too.

NEXT STEP

Start small — one engagement, low risk.

Pick a single live need on your side — one specialist phase or one embedded engineer for a month — and let's run it. If it delivers, we scale the partnership from proof, not promises.

What I need from you

One current or upcoming client need where an extra senior specialist would help — the area, the timeline, the stack.

What you get back

A named engineer, a scoped plan, and a start date — within the week.

Let's scope the first one → arslan@electrocomit.com
