

BUILD PLAN · PREPARED FOR ANDREW · CONFIDENTIAL

ElectroCom × Vyrve

AI triathlon coaching — from prototype to real athletes.

A phased plan to take Vyrve from a working prototype to an MVP athletes actually train on. One platform first, the AI coaching loop at the center, shipped fast — then we scale from what real users do with it.

WHAT YOU'RE BUILDING

Vyrve, as I understood it on the call.

An AI coach in a triathlete's pocket — one that plans, adapts, and keeps them on track across swim, bike, and run, with real pro-athlete credibility behind it.

01

An AI coach, not a log

The product isn't a tracker — it's the coaching intelligence that turns an athlete's goal into a plan and adjusts it as life happens.

02

Pro credibility built in

The pro-triathlete angle is the trust signal that separates Vyrve from a generic fitness app.

03

Mobile-first

Athletes live on their phone at 5am before a session. iOS and Android are the eventual home — one comes first.

If I got any of this wrong, tell me — the plan bends to fit what Vyrve actually is.

THE HONEST READ

The full build is bigger than a month. Here's the smart way in.

iOS + Android + a real AI coaching layer is a substantial build. Chasing all of it at once spends the budget before you learn what athletes actually use.

So we don't

Boil the ocean, ship two half-finished platforms, or burn months polishing features before a single athlete has trained on it.

We do

Build one focused MVP — a single platform, the core coaching loop — get it in front of real athletes fast, then expand from evidence, not guesswork.

You keep control of budget at every step, and every dollar goes toward something a user can touch.

WHY US

AI + mobile — exactly Vyrve's combo

A senior team that does the two hard parts together.

I spent last year working with [OpenAI on their video-generation model training](#) — hands-on at the frontier of generative AI. The AI coaching side is home turf, and we ship the mobile app around it in the same house.

8+ yrs

full-stack + AI/ML
engineering

PROOF WE SHIP — NOT A DECK OF DEMOS

Effigy.ai — an AI product we built and took to market.

AI-generated fashion marketing photography, replacing physical photoshoots. Our own product, live with paying brands — the same muscle Vyrve needs: an AI core wrapped in a product people pay to use.

95%

cost reduction vs.
traditional shoots

48 hrs

campaign turnaround,
upload to delivery

100+

brands producing
content on it

Generative pipelines, model conditioning, and a real delivery workflow — end to end. A shipped, revenue-generating product, not a prototype.

THE PLAN

PHASE 1

MVP — an app real athletes can train on. $\approx$ 4–6 weeks.

- **One platform first** — iOS or Android, whichever your athletes are on. All the focus, none of the double build.
- **The core coaching loop** — onboarding + athlete profile, adaptive training-plan generation, and the AI coach that adjusts it. The thing that makes Vyrve, Vyrve.
- **Backend + data foundation** — the athlete and training data model set up to grow, not rebuilt later.

Deliverable

A working app in real athletes' hands — enough to learn what they use, keep, and ask for next.

You approve the exact Phase 1 scope before we write a line of code.

THE PLAN

PHASE
2

Scale — from what Phase 1 taught us.

We only build Phase 2 once real usage tells us what's worth building.
Likely candidates:

Second platform

The other of iOS / Android, once the MVP has proven the loop.

Deeper AI coaching

Adaptive feedback, session-by-session adjustment, richer personalization.

Wearable & data sync

Garmin / Strava / Apple Health so plans respond to what athletes actually did.

Each phase is scoped, quoted, and approved on its own. No open-ended commitment.

INVESTMENT

Straight rate, phased spend, you approve each step.

- **\$60/hr**, held flat across every phase.
- Billed biweekly. You approve scope *before* each phase starts.
- Tight budget? We cut Phase 1 scope to fit — we don't discount the rate and thin the team.

Phase 1 MVP — estimate range

SCOPE	HOURS	COST
Lean single- platform MVP	120– 200	\$7k–\$12k
MVP + real AI coaching logic	200– 300	\$12k–\$18k

We lock the exact number to the final Phase 1 scope on the follow-up call.

NEXT STEP

One short call to lock Phase 1 — then a start date.

Pick the platform, confirm the must-have features for the MVP, and I'll hand back a fixed Phase 1 scope with a firm number and a start date. If it fits, we start.

What I need from you

iOS or Android first, and the 2–3 features an athlete can't launch without. That's enough to fix the scope.

What you get back

A locked Phase 1 scope, a firm estimate, and a start date — inside a couple of days.

Let's lock Phase 1 → arslan@electrocomit.com
